Reading / Resources

- **String** (MDN)

Homework

1. Create a script that concatenates your first and last name (see example code) into the string "Hello, my full name is John Tsevdos!".

```
const firstName = "John";
const lastName = "Tsevdos";

// result => "Hello, my full name is John Tsevdos!"
```

- using the **+** operator
- using backticks (`` ` ``)

2. Given the string below:

```
const dna = "  TCG-TAC-CAG-ACT-gaC-TAC-TAa-CcA-GTC-cAt-AGA-GCT    ";
```

- remove the extra whitespace
- replace all the lowercase characters with their uppercase equivalents
- create an array with each DNA sequence
- bonus: (do it in one line)
